FOCUS ON TOMORROW

“INNOVATION AT WORK” REQUEST FOR PROPOSALS 2011

Deadline: August 8, 2011

In Partnership with ...

Changes from 2010 Request for Proposals

Please note the following changes:

- In 2011, academic researchers (affiliated with a college, university, or research institution) will still be eligible for INNOVATION AT WORK funding; however, a non-academic partner must be included on the research team. This will help to build skills and knowledge among non-academic researchers, and make the research outcomes more relevant and meaningful.
- Beginning in 2011, 10% of the total budget for each grant will be held back pending receipt of a final, edited report that addresses the peer reviewers' comments and meets the guidelines laid out in the reporting instructions. This will ensure more consistency in the reports we post on our website and share with stakeholders.
- The application form now includes a section where applicants should indicate whether the current proposal is a resubmission and their responses to reviewers' comments (if applicable).

INNOVATION AT WORK

Request for Proposals 2011

WorkSafeBC is pleased to issue a second Request for Proposals this year for INNOVATION AT WORK grants. A limited amount of funds are available for this competition.

I. Introduction

WorkSafeBC is dedicated to the vision of workers and workplaces safe and secure from injury, illness and disease. In order to achieve this goal, WorkSafeBC, together with its partners, must encourage and support the development and use of the best scientific evidence on issues that workers, employers and the organizations themselves face in seeking to prevent injury and illness, to return injured workers to health and to work, and to provide fair compensation.

To this end, WorkSafeBC offers research grants under its program FOCUS ON TOMORROW. Under its category INNOVATION AT WORK, for which this Request for Proposals (RFP) is specifically issued, grants are made available to a broad group of applicants (including professional researchers, workplace parties, unions, employer organizations, and educators) and are intended to support the development of new knowledge and/or practical problem-solving at the workplace level.

Further details on the eligibility criteria, research priorities, and terms and conditions of funding are contained in this RFP. Application forms and guidelines are available on WorkSafeBC's website.

WorkSafeBC has awarded funding to 58 INNOVATION AT WORK projects in total, spanning a broad range of novel topics and ideas – each of which aim to develop and/or enhance workplace health and safety using practical approaches among workplaces and workplace participants. Some of these projects are also funded through partnership agreements with other jurisdictions.

Partnering with Other Jurisdictions

The partnership agreements with the Workers' Compensation Board of Manitoba, WorkSafe Saskatchewan, the Workplace Health, Safety and Compensation Commission of Newfoundland and Labrador, the Workers' Compensation Board of Nova Scotia, Alberta Employment and Immigration and WorkSafeNB are continued. These partnerships provide a cost effective means of leveraging limited research funds in pursuit of common priorities. For more information on partnering with WorkSafeBC, please contact the Research Secretariat.

Research Needs and Relevance

The Board of Directors of WorkSafeBC wants to ensure that research funded through FOCUS ON TOMORROW addresses real needs of the organization and its partners, and of employers and workers in workplaces. The Board of Directors seeks to support research that provides tangible, even quantifiable benefits where possible, by helping to identify potential solutions to real problems.

In order to help researchers focus on these issues, the following questions are included in the application forms:

- What is the problem to be solved and how will the research attempt to solve the problem?
- How will the research be done?
- Why is the research important and how does the research support WorkSafeBC and/or its partners mandate?

- How will we know if the research has been successful in solving the problem?

The Research Secretariat will facilitate access to WorkSafeBC's policymakers for researchers who wish to discuss potential projects. See page 9 for more details.

High Risk Accident Types

The Board of Directors is also giving priority to projects that target reduction of frequency of accident types that result in large numbers of serious injuries for workers in B.C. These are:

- Fall to lower level
- Struck by object
- Fall on same level
- Caught or compressed by equipment or object
- Struck against object

As such, we are inviting proposals for projects that have the potential to significantly reduce the incidence of such injuries and to therefore address specific needs of the organization and its partners, and workers and employers in workplaces. Research topics may address specific industries, occupations, technology, equipment and/or material, work processes, management systems, culture, and/or human factors that influence, or are hypothesized to influence, these traumatic injuries.

The Research Secretariat can provide researchers with some statistics on the number of these claims types by costs, which are further broken down by industry sectors.

Knowledge Translation and Exchange

Knowledge Translation (KT) is the art of making the results of research relevant and meaningful to a specific audience. *Knowledge Translation and Exchange (KTE)* is kind of a feedback loop that helps researchers to be more accountable to research participants and other end-users of their work.

We encourage applicants to include potential end users in the design and execution of each research project. We also require researchers to develop plans and approaches for communicating and disseminating research findings. Some examples are: workshops, Q&A sessions, website content, online message boards, journal articles, flyers, and posters.

II. INNOVATION AT WORK

INNOVATION AT WORK supports the development of practical, shop-floor solutions that translate new knowledge into practice, or that solve specific problems in workplaces. It is also designed to support development and evaluation of educational projects that will benefit workers and employers by assisting employers to ensure safety and health protection of workers. Projects may include development of best practices applicable to specific work related activities. Innovation grants are intended to provide funding for small-scale research projects that will promote increased interaction amongst workplace parties, organizations, and/or researchers. Using the collective resources of those who are most affected by its policies and programs will assist WorkSafeBC and employers in ensuring that critical areas of need are addressed and practical solutions are found and implemented. The maximum grant for these projects is normally \$50,000, for a maximum duration of one year.

WorkSafeBC will strongly favour those projects with the highest potential for practical or applied usage, and that have a high degree of relevance for B.C. workplaces and/or our partners' workplaces. Projects that have broad applicability or that are of specific interest to our partners are those most likely to be funded through our partnerships with other jurisdictions. Applicants are encouraged to contact our partners directly, **prior to the competition deadline**, when considering projects that may be of specific interest to them. Contact information is available at the end of this document.

Who is eligible for INNOVATION AT WORK grants?

Anyone who is a Canadian resident may apply for an INNOVATION AT WORK grant. The experience and capability of the project team will be a primary consideration. Involving the experiences and expertise of people in the workplace and the research/training community will also be an important consideration. We also encourage collaboration among workplace parties, researchers, and educators and prefer projects which involve workplace parties to the greatest extent possible.

Academic researchers (affiliated with a college, university, or research institution) may apply for INNOVATION AT WORK funding. However, a non-academic partner must be included on the research team. Proposals should demonstrate a commitment to making the research relevant and meaningful to study participants.

Full-time employees of WorkSafeBC are not eligible to be a Principal Applicant; however, WorkSafeBC researchers may participate as Co-applicants in research proposals submitted to the Research Secretariat.

WorkSafeBC will strongly favour those projects with the highest potential for practical or applied usage, and that have a high degree of relevance for B.C. workplaces and/or our partners' workplaces. Projects that have broad applicability or that are of specific interest to our partners are those most likely to be funded through our partnerships with other jurisdictions. Applicants are encouraged to contact our partners directly when considering projects that may be of specific interest to them. Contact information is available at the end of this document.

Small Initiatives Funding

If you have a health and safety project proposal that supports WorkSafeBC's objectives but does not meet the specific research requirements of FOCUS ON TOMORROW, then you may be eligible for Small Initiatives Funding administered through WorkSafeBC's Industry and Labour Services Department (ILS).

Small Initiatives Funding is intended for projects that promote and enhance occupational health and safety, and may or may not include a research component. Past projects which have received Small Initiatives Funding have included the production of industry-specific training material, health and safety videos, and publications; conducting risk assessments or other trend analysis; and developing awareness programs.

Proposals must have clearly defined deliverables and timelines, and should include bipartite support where possible. Preference will be given to proposals that result in outcomes that can be immediately applied by industry to improve health and safety and to those applicants with financial or in-kind contribution.

Selection is made through an internal committee process and is based on need and relevance to B.C. workplaces. Grants are generally up to \$15,000 per project, but may vary. For more information, telephone (604) 231-8494. When you call, be prepared to provide your name and to indicate the industry your proposal focuses on.

III. Research Priorities

Generally, WorkSafeBC and its partners will consider projects that fall within their mandate of occupational injury and disease prevention, successful rehabilitation and return-to-work, and fair compensation. WorkSafeBC's Board of Directors will give priority to proposals that support one or more of the organization's key strategic initiatives and that have a clear potential to positively impact health and safety in B.C. workplaces or the workers' compensation system.

Within the general priorities as discussed above, the Board of Directors has identified a list of specific issues of concern for 2011. The list includes the priority items from last year, but with new, expanded, or altered priority items.

2011 Research Priorities

Reducing the frequency of accident types that result in large numbers of serious injuries

- Fall to lower level
- Struck by object
- Fall on same level
- Caught or compressed by equipment or object
- Struck against object

Societal Change in Occupational Health and Safety

- Influencing general attitudes to workplace safety, including the effectiveness of social marketing
- Changing high risk behaviours

Emerging Occupational Diseases

- Infectious diseases
- Work-relatedness of neurological diseases
- Occupational related cancers
 - Risk assessment of lung cancer among smokers with past exposure to asbestos
- Workplace use of carcinogens, mutagens, reproductive hazards (endocrine disruptors, solvents) and sensitizing agents – analysis on reported incidents, exposures, first aid reports, and potential use of less toxic alternatives

Compensation/Rehabilitation Issues

- Best practices in treatment of chronic pain – differentiation among varying populations such as working age individuals with specific pathology, and working age individuals without obvious identifiable pathology
- The effectiveness of high energy shock wave therapy in the treatment of certain musculoskeletal injuries
- Assessment of whether the current approach to compensation adequately reflects the impact of chronic pain on workers' earning capacity
- Employability assessments – six-month and longer term follow-up to determine the outcome for workers
- The impact of pre-compensation disability management on claims and return to work

- What impact does the survival of a serious (non-permanent disability) work-related injury have on subsequent claims experience?
- Are vulnerable workers including temporary foreign workers, agricultural workers, and recent immigrant workers aware of and acting on their rights and responsibilities under the *Workers Compensation Act* and corresponding regulations?
- To what extent (if any) and for what reasons does under-reporting injuries and exposures exist among:
 - Particular groups of workers (temporary foreign workers, ethnic minorities, workers of a particular socio-economic class, women, young workers)
 - Particular occupational groups (care aides, domestics, roofers, nurses, restaurant workers)
 - Particular industries (hospitality, construction, agriculture)
 - Particular illness (asbestos-related illness)
- To what extent are work-related fatalities, as recorded by hospitals and vital statistics, reflected in WorkSafeBC data?
- Does a step up or step down in wage rate have an impact on claim duration?
- To what extent and for what reasons does the population of denied (disallowed and rejected) claims differ from the population of accepted claims?
- To what extent does the current health status or non-disabling condition (such as obesity, diabetes) of workers influence the risk of injury and duration of recovery?
- Solutions in reducing musculoskeletal injuries – examining effective ergonomic interventions and their effect on return to work
- The impact of psychological conditions arising as a consequence of physical injuries from workplace injuries: emerging trends, best practice disability treatments and their costs
- Predictors of post-injury threats of violence against benefit providers
- Treatment of tendinopathies – effectiveness of extracorporeal shockwave treatment
- Efficacy and use of opioids and other addictive drugs in the treatment of workers with musculoskeletal disorders

Prevention Issues

- Implications of key shifts in the economy (e.g. changing employment relationships) for the workers' compensation system in B.C.
- Measurement of safety culture/climate or other leading indicators of safety at the firm, sector, or economy-wide level
- Comparative study of the health and safety culture and practices in the upstream oil and gas, construction, and logging industries to identify factors contributing to the differences in injury rates between these sectors
- Evaluation of prevention initiatives, including the impact of educational materials and training initiatives at the sector or economy-wide level
- Joint Health and Safety Committees – compliance and effectiveness
- Do workers with first-aid certificates have fewer work-related injuries?
- The efficacy of safety-engineered medical devices, and inter-type comparisons, in preventing work-related injuries – including assessment of the suitability of safety-engineered scalpels in various surgical procedures

- Development and evaluation of resources for workers and employers to assist in identification and use of toxic substance substitutions in the workplace
- Musculoskeletal injury prevention among older workers
- Long-term impact to workers using in-ear audio radio receivers and development of standards for measuring audio output of these devices

In addition to the above priority items, partner jurisdictions have identified the following areas of interest. (Applicants are encouraged to contact our partners directly, *prior to the competition deadline*, when considering projects that may be of specific interest to them. Once the competition is closed however, all inquiries should come directly to the Research Secretariat at WorkSafeBC. Contact information is available at the end of this document.)

Workers' Compensation Board of Nova Scotia:

- Influence of health and safety centres on nature, rate, severity and duration of workplace injury, and on levels of worker advocacy for safety at the workplace
- Explore influence of mandatory OHS curriculum in public school, trade school and college programs on (1) evidence of safety advocacy and (2) injury rates of young workers who have completed curriculum
- Impact of musculoskeletal workplace injury on provincial and territorial healthcare systems
- Relationship of fatigue to nature and severity of workplace injury, and impact of alternative workplace scheduling approaches
- Effectiveness of financial incentive and disincentive programs used by Canadian workplace safety and insurance systems
- Identify best practices for influencing business leaders to make sustained health and safety improvements in their companies
- Identify leading indicators for workplace capacity to sustain improved health and safety performance
- Impact of industry safety associations on implementation of workplace health and safety programs, and the reduction of workplace injury and illness. What is the influence of differing methods of financial support on the operations and accountability structures of the associations?
- What is the impact of social marketing on improved workplace health and safety, and injury prevention? How can a cost benefit analysis be made?

Alberta Employment and Immigration:

- Occupational cancers – causation, number of actual incidences of work-related cancers versus number of incidences claimed/paid through workers' compensation
- Motor vehicle fatalities – investigations, causes, incidences
- Health and safety in the retail sector
- Best practices in health and safety in the public sector
- Occupational disease tracking systems – identifying exposures, collection of accurate incidence data

Workplace Health, Safety and Compensation Commission of Newfoundland and Labrador (WHSCC):

- Health care provider outcomes based on effective (medical) interventions for repetitive strain injuries
- Environmental scan of national occupational health and safety education curriculum
- Occupational cancers – causation, number of actual incidences of work-related cancers versus number of incidences claimed/paid through workers' compensation
- Occupational disease tracking systems – identifying exposures, collection of accurate incidence data
- Injury rates among new entrants to the workforce and their knowledge and/or training on health and safety
- Effectiveness of incentive and disincentive initiatives programs used by Canadian workplace safety and insurance systems
- Factors that promote the success of early and safe return to work and labour market re-entry programs

WorkSafe Saskatchewan:

- Effects of shift work and development of best practice guidelines to decrease risks of shift work
- Ergonomics in health care
 - Prevention of musculoskeletal injuries among Saskatchewan health care workers
- Noise induced hearing loss in industry sectors such as construction, steel fabrication, and manufacturing
 - What is the rate of injury and are these injuries under reported?
- What are the (unknown) impacts of uranium mining on Saskatchewan workers?
- Best practices in health and safety in the public sector
 - What are the specific issues in the public sector and how can prevention efforts be improved?
- Impact of duty to accommodate legislation
 - What is the value/effectiveness of legislating/obligating employers to have return to work programs in place as part of their legal obligation to accommodate? How is it monitored or enforced?
- Societal change in health and safety
 - How do we influence general attitudes to workplace health and safety?
 - How do we change high risk behaviours?
- Prevention of injuries in youth (15-24 years)
 - Of the many prevention programs geared to youth, which are most effective, and why?
- Impacts of financial incentive/disincentive programs
 - Are some programs more effective than others?

IV. How to Apply

Notice of Intent

Prospective applicants should first submit (by e-mail to resquery@worksafebc.com) a notice of their intention to apply for funding by **4 pm, July 4, 2011**. The notice of intent should include:

- the title of the research and a one-paragraph summary of the proposed research
- the contact information and name of the Principal Applicant, and
- the identities of other key personnel and participating institutions

Although the notice of intent is not binding and will not be used in the review of the application, the Research Secretariat will use the information it contains to estimate workload and to identify potential reviewers.

Application Procedures

All forms and application materials are available for download from WorkSafeBC's website. When completing the application form, applicants should review the guidelines for completing specific sections. The proposals must address all criteria as described below under "Evaluation Process and Criteria for Peer Review".

Allowable Costs

Applicants must provide a detailed budget, with accompanying justification for all operating expenses. The budget must be consistent with the stated objectives and planned activities for the project. Applicants should consult the application guidelines as well as the *Guidelines for Allowable Travel Expenses* for a listing and description of allowable costs and activities.

Note: indirect/overhead costs are not permissible.

Assistance Available for Applicants

Injury Statistics: Projects that target the reduction of high risk accident types are a priority for WorkSafeBC. The Research Secretariat can assist researchers with obtaining statistics for research projects of this nature.

Access to Policy or Industry Experts: It is necessary that research projects funded through WorkSafeBC address workplace health and safety and related needs of organizations, employers, and workers. The Research Secretariat will facilitate access to WorkSafeBC's policy experts for researchers who wish to discuss research needs and relevance of potential projects. WorkSafeBC's contact information can be found at the end of this document.

Industry and Labour Services Department of WorkSafeBC is committed to supporting improved workplace health and safety among and across industry sectors. In doing so, it partners and builds relationships with varying industry stakeholders. In recognition of challenges to linking research project ideas to relevant and workable designs and solutions, researchers are invited to contact ILS for support and assistance relating to potential research projects. ILS may be able to i) assist researchers in identifying specific industry needs; ii) provide advice on technical aspects of projects; or iii) provide linkages to industry stakeholders. For assistance in these areas, please telephone (604) 231-8494.

Assistance in Proposal Writing: For assistance in proposal writing, applicants are encouraged to visit the British Columbia Environmental and Occupational Health Research Network website to view its [Grant Writing Toolkit](#). This toolkit provides useful tips on grant writing in general, with specific reference to the INNOVATION AT WORK category of funding.

Applicant Consent Form for Use and Disclosure of Personal Information

A signed form must be attached to the application form for **each** project team member whose personal information is included in the application.

Ethics and Protection of Privacy

In the conduct of its work, the Research Secretariat subscribes to and acknowledges its obligations under applicable legislation regarding research involving humans and privacy protection. As such, all proposals involving human participants must submit an ethics review certificate from their institution to the Research Secretariat before funds will be released. Those who are not certain about how to obtain an ethics certificate may contact the Research Secretariat. In addition, applicants must provide a detailed security plan to ensure that there are reasonable administrative, technical and physical safeguards to prevent unauthorized use or disclosure of records.

Award Criteria

The Research Secretariat awards research funds on a competitive basis. All applications submitted in response to this RFP will compete for available funds with all other applications.

The following will be considered in making funding recommendations:

- quality of the proposed project as determined by peer review
- relevance of the project to WorkSafeBC and/or our partners' workplaces, and
- availability of funds

Evaluation Process and Criteria for Peer Review

Research proposals submitted to the Research Secretariat are evaluated in a three-stage process. This process is designed to be scientifically/methodologically credible, and transparent and accountable, while emphasizing relevance to B.C. and/or the partners' workplaces and the workers' compensation system:

- Stage 1:** preliminary review by the Research Secretariat
- Stage 2:** peer review by experts
- Stage 3:** relevance review by a cross-divisional committee of WorkSafeBC staff and an external advisory committee

Upon receipt, the Research Secretariat will review all applications for completeness and for compliance with the parameters of this competition. Proposals that are not complete, do not provide adequate information in the required sections, exceed length limitations or are otherwise in a form that is unacceptable for peer review, will be returned to the applicant without further consideration.

Funding Decisions and Notification of Applicants

On completion of the review process, the Research Secretariat will receive the ranking lists, merit scores (ratings) and recommendations for the applications submitted. The Research Secretariat will then present the recommendations to the Board of Directors. Final authority for approving WorkSafeBC funding rests with the Board of Directors.

The Research Secretariat will notify the successful applicants and then the names of the individual researchers and research team members will be posted on WorkSafeBC's website.

General Terms and Conditions of Funding

All standard terms and conditions, as specified on WorkSafeBC's website, shall apply to those projects funded through FOCUS ON TOMORROW. General terms and conditions of funding cover such areas as:

- Applicant and Institutional Responsibilities
- Ethics
- Official Language Policy
- Access to Information and Privacy Acts
- Acknowledgement of WorkSafeBC and/or our partners' support, etc.

Successful recipients will be informed of any special conditions when they receive their notification of funding. The Principal Applicant (with funding responsibilities) will be required to submit a financial report describing how the grant funds were used at the end of the term of the grant.

Deadline for the Submission of Application Materials

A signed single-sided original (hard copy) of the application plus 3 single-sided copies **must** be received by **4pm, August 8, 2011**.

Applicants outside of the Lower Mainland or out of Province must ensure packages were picked up prior to the 4pm deadline. Late applications will be returned unopened and without review. The only materials that will be accepted after the deadline are ethics certificates.

Deliver packages to:

**Research Secretariat
WorkSafeBC
