Part 6: Substance Specific Requirements, relating to safety-engineered devices for all hollow bore needles

1. Name: Rebecca Grindon

(a) Feedback is provided: on own behalf

Organization:

(b) Feedback is provided: from a worker's perspective

2. E-mail:

3. Feedback:

Part 6: While supporting the proposed amendment regarding safety engineered medical devices, I have concern that there is too long a time frame until universal implementation of such a program. Additionally there remains no provision to log or track the medical sharps injuries occurring. Finally there must be consultation with Joint Occupational Health and Safety worker committee in terms of product selection. The determining factor MUST be the best product, not the least expensive!

4. Please indicate your level of support of the proposed amendments:  
generally agree
