Part 6 substance specific

Part 3 and 4 new and young workers and working alone at gas stations

I strongly support these regulations. I work in the corrections branch of the government with inmates. I am a young worker who has found on several occasions that I had not received proper training or orientations to workplace hazards. One of those hazards being needles used by inmates. I would strongly recommend the extension of this regulation to cover all medical sharp devices and a quicker implementation date. The sooner the hazard is removed the less likely I am to be injured.

4. Please indicate your level of support of the proposed amendments:
