RE: Draft - Changes to Young Worker Training

In particular we would like to review Part 3 Rights and responsibilities  
Young or new workers.

My proposal is to have any legislation be industry specific, and or with employees in excess of  
50

The non destructive testing industry is already highly regulated, and governed by the Canadian  
Nuclear Safety Commission. Also NR Can with the training requirements for furtherance in the  
industry. We are already burdened with excessive paperwork, since the regulations for these  
governing bodies have been restructured.

I agree where there are specifications, and there are people at risk, there should be guidelines.  
Industries which are highly regulated should be exempt further regulation.

The proposed requirements are in place within the non destructive testing industry. Monitored by  
the governing bodies.

Our concerns are not unfounded and the paperwork burden is becoming overwhelming. We are a  
small company and not in the position to hire additional staff to handle the excessive amount  
of paperwork which already exists, not to mention the costs of a bureaucracy to handle the audit  
of such regulations. This cost will obviously through the contributions be born by the contractors.  
I don't feel there is room for additional taxes.

Thank you

Respectfully yours

Earl M. Cook  
Administrator.
