Regarding COCA - WCB Update #358

We feel that this proposed regulation would more than triple our paperwork. In our industry our workers are constantly on the move between projects and on the same project, sometimes working on 3 or more projects per day and then going back to complete them at another time. The construction projects themselves are often changing as the project is constructed and evolved.

With this regulation in place we could be required to assess the safety performance of our workers several times a day in some instances.

This proposed regulation is just not feasible within our industry and our company.
